International Sustainability and Carbon Certification

# ISCC System opportunities under EU recognition

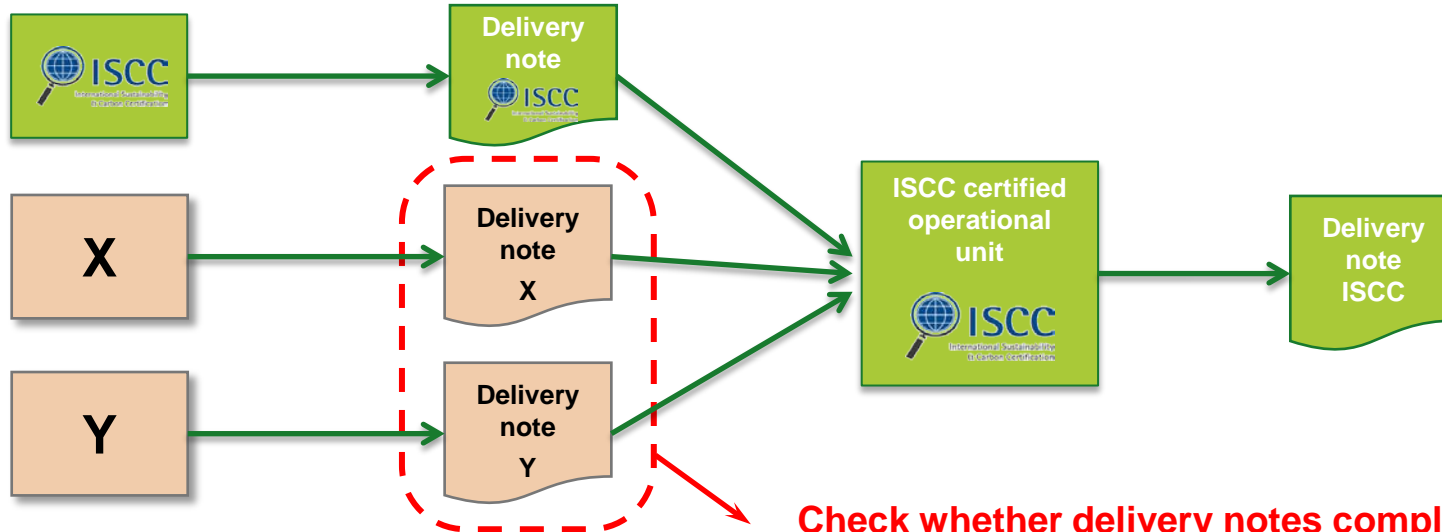

- 1. Acceptance of all EU recognized certification schemes**
  - No gap analysis or agreement of mutual recognition required
  - ISCC checklist for easy processing of delivery notes from recognized schemes
  
- 2. Easy Upgrade from current to ISCC EU recognized scheme**
  - Signing the ISCC upgrade form and receiving EU certificate from certification body
  
- 3. Easy access to all EU biofuel markets**
  - Registration for access to the German database (Nabisy)
  - Tool for generating sustainability declarations and data files required by EU Member States (EU-27 module)
  
- 4. Resource saving audit procedures on farm level**
  - Minimizing audit effort by applying group certification and document check when sufficient
  - Audit of First Gathering Point (FGP) possible independently from farm audits
  
- 5. The only recognized certification scheme with a successful track record**

# ISCC accepts all recognized schemes after a successful check of delivery notes

Operational unit certified under  
EU recognized scheme

Delivery  
notes

**Check whether delivery notes comply with recognized scope of the respective scheme and Member State requirements**

## Three steps to upgrade your certificate

Download upgrade form, fill in and email to your CB

CB will verify information and issue new ISCC EU certificate

ISCC EU certificate will be published on ISCC Website

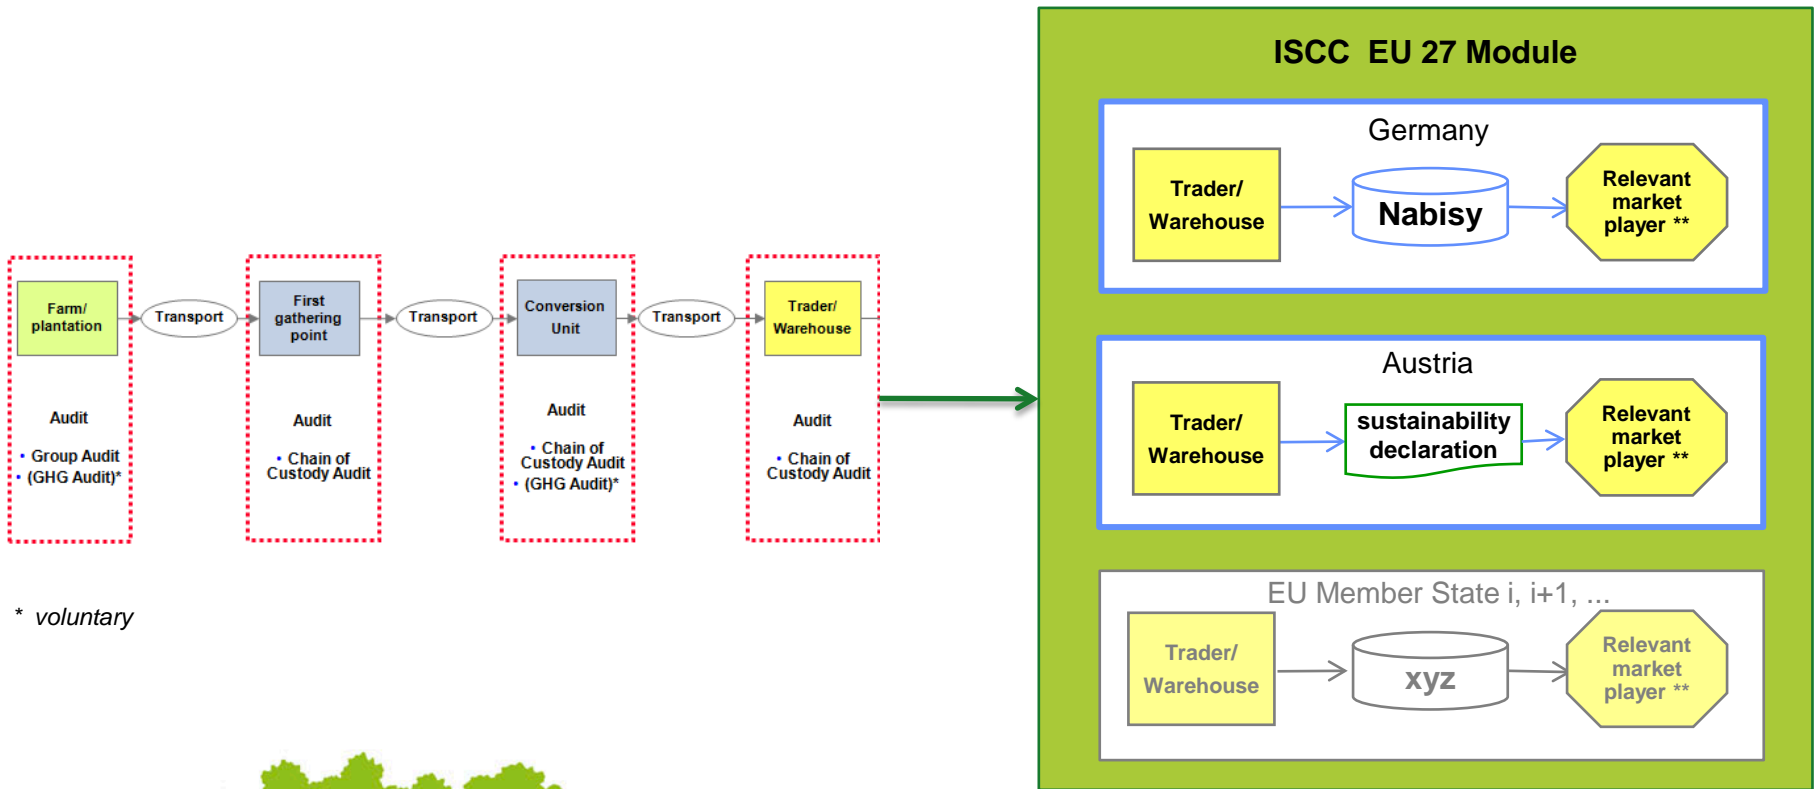

- To upgrade from your currently valid ISCC DE certificate to the ISCC EU certificate you need to fill in and sign the ISCC upgrade form and send it to your CB.

- The CB will verify the information and will then issue the ISCC EU certificate. The ISCC EU certificate will run in parallel to the ISCC DE certificate until the re-certification audit.

- On the ISCC Website both certificates will be available until re-certification.

# ISCC enables easy access to the German biofuels market and other EU Member States

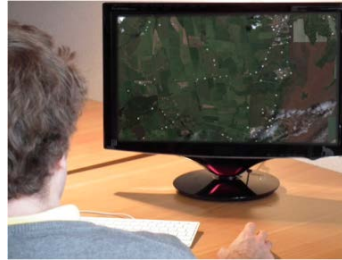

\* voluntary

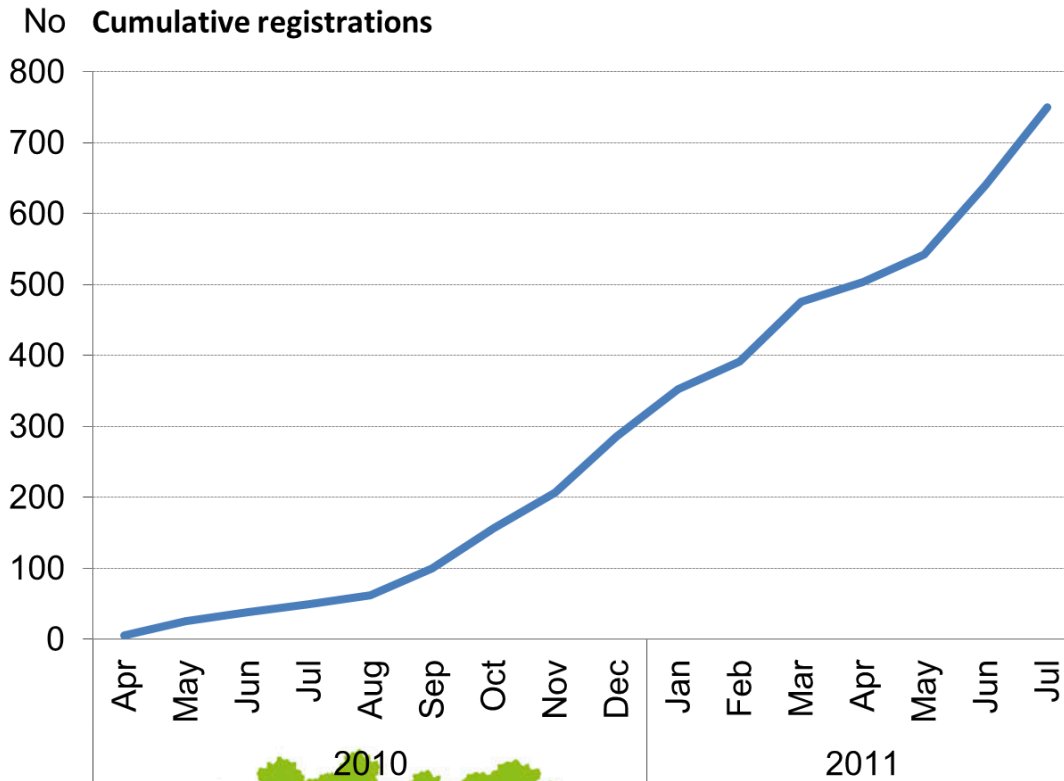

\*\* Renewable energy installations (CHP plants) and biofuel quota obligated parties

# Efficient and resource saving audit procedures for farms

- Where feasible desk audit and document checks can be used
- To guarantee that no-go areas are not violated, databases on protected areas can be used, e.g.:
  - World Intact Forest Landscapes
  - Glob Cover Land Map
  - Land Cover Type Yearly
  - Global Lakes and Wetland Database (GLWD)
  - Harmonized World Soil Database
  - MODIS
  - Carbon and Biodiversity Atlas

## ISCC is well-proven. More than 750 companies from 45 countries have already registered with ISCC

- ISCC is used all over the world by more than 750 companies from 45 countries
- 16 certification bodies and more than 350 auditors ensure proper implementation of ISCC
- Association for stakeholder dialogue was set up in January 2010. Currently about 60 members
