

Sustainability-related issues in RED2

- Everlasting discussion
- Discussion based on physical properties
- “Sustainability” is related to several parameters
- Council seems to be open to explore various pathways
- Sustainability concerns high in the agenda

Perceived difficulties and what might happen next

- Implementability
- No “one-size-fits-all” solution
- Pressure to agree on a “perfect system”
- Maybe a looser framework and more rigid control mechanisms would be a good solution?
- There seems to be willingness to agree as quick as possible
