Sustainability Certification for all Markets –
One Stop Shopping Approach of ISCC

Andreas Feige, ISCC System GmbH
Operators looking for sustainability standards will encounter a heterogeneous landscape – non harmonized

**Selection of sustainability standards**

*Including sustainability requirements requested by NGOs/institutions*
This fragmented landscape is causing quite some headache for operators

**Challenges for operators**

- Sustainability requirements different between and within market segments
- Even if similar, sustainability requirements are phrased and structured differently
  - In depth know-how required
  - Open to misinformation and misunderstanding
- Multiple certificates needed
  - Multiple costs
  - Increasing time and effort for training, bookkeeping and operation
  - Increasing risks
ISCC is a one stop shop for all crops and markets. ISCC has been accepted by SAI and FEFAC as to be meeting their requirements.
One-stop-shopping solution – Example SAI: compliance with sustainability requirements of important customer groups for food
Providing access to important markets is not static – Example eligibility of new materials and processes under the RED/FQD

Eligibility of new technologies and new materials under RED/FQD

- Electrolysis
- Geosynthesis
- Polymer Degradation
- Co-Processing
- Gas Fermentation
- …

Renewables of non-biological origin

Waste

Collecting Point

First Gathering Point

Farm/Plantation

Farm/Plantation

Point of origin

Point of origin

Farm/Plantation
Fighting deforestation requires a holistic approach consisting of four major building blocks

**Certification**
- Deforestation free
  - No compensation
  - No cherry picking
- GHG reduction
- Compliant to social and environmental requirements

**Smallholder development**
- Grouping
- Skill development
- Financial sustainability
- Strategic partnership
  - SNV and ISCC

**National policy consideration**
- ISPO/MSPO
- Landrights
- Stakeholder interaction

**Monitoring**
- Quarterly monitoring and identification of deforestation hotspot
- Analysis and management of hotspots
- Mapping supply chains
