

ISCC – International Sustainability and Carbon Certification

About this Summary Audit Report

All ISCC audits are conducted based on the applicable ISCC requirements as laid down in the ISCC System Documents. The relevant ISCC requirements are specified in audit procedures (checklists) that have to be used by auditors from the Certification Bodies (CBs) for ISCC audits. The completed audit procedures are available to the CB, the certified company and ISCC. Based on the audit procedures the CB prepares and submits this Summary Audit Report to ISCC and the certified company. The Summary Audit Report is published on the ISCC website together with further information on the ISCC certificate. The report is a tool to further enhance the transparency of the ISCC sustainability certification. It provides an overview on relevant aspects and results of the audit of a certified ISCC System User. Information and data in the report reflect the situation at the date of the audit. Only such activities, processes or materials relevant for the ISCC audit shall be included in this Summary Audit Report. The report shall not contain confidential or business sensitive information or data, including data about amounts or volumes of material, names and/or addresses of subcontractors or service providers, clients, customers, or others. Therefore, data on volumes of sustainable material is provided on a voluntary basis only. The Summary Audit Report has to be provided for all ISCC certified System User, and the publication on the ISCC Website is mandatory.

The layout of this report is provided by ISCC to enable a harmonised approach and to foster the comparability. The CB is responsible for correctness of the information provided. The initial template of this Summary Audit Report was compiled in 2016/2017 in a multi-stakeholder process in the framework of a working group of members of the ISCC Association (ISCC e.V.). For all audits conducted since October 2017 the issuing of the report has been mandatory. The members of ISCC e.V. revised the template of the report in the second half of 2018. In November 2022 an update was released to reflect recent developments, e.g. by adding additional certification scopes.

1 About ISCC

ISCC – International Sustainability and Carbon Certification – is a system for the implementation and certification of sustainable, traceable and deforestation-free supply chains. ISCC certification covers supply chains for all kinds of biomass (including agricultural and forest biomass), biogenic waste and residues, non-biological renewable materials and recycled carbon-based materials. ISCC certification ensures compliance with high ecological and social sustainability requirements, greenhouse gas emissions savings and traceability throughout the supply chain. A multi-stakeholder dialogue is the basis for the development and continuous improvement of the ISCC system.

ISCC certification ensures that

- Biomass is not produced on land with high biodiversity and high carbon stock
- Good agricultural practices protecting soil, water and air are applied
- Human rights, labour and land rights are respected
- Sustainable material is traceable throughout international supply chains
- Greenhouse gas reduction targets are met (e.g. for international or European biofuel markets)

ISCC certification audits are conducted by independent third-party Certification Bodies (CBs) cooperating with ISCC. Competent and trained auditors, evaluating compliance with the ISCC sustainability standard, conduct the audits.

2 Information on the Certification Body

Name of CB:	
Description and additional information: (e.g. relevant recognitions or accreditations, authorities responsible for recognition, accreditation, surveillance and/ or monitoring)	
CB email:	
CB website:	

3 System User and Audit Process

3.1 ISCC System User (Operational Site Registered for Certification)

Company name	(legal name as stated on the certificate)	
Address	(as stated on the certificate)	
Country		
Contact details of relevant department	(General contact information of the department responsible for sustainability should be provided. Personal information included only on voluntary basis)	
Date of the audit		
Place of audit if different from address stated above (only applicable for traders)		
Certification system(s) audited	ISCC CORSIA <input type="checkbox"/>	ISCC CORSIA PLUS <input type="checkbox"/>
Chain of custody option applied	Mass Balance <input type="checkbox"/>	Segregation <input type="checkbox"/>
Year of first ISCC certification		
Year of first ISCC CORSIA/CORSIA PLUS certification		
Other sustainability certification system(s) used*	Yes <input type="checkbox"/>	No <input type="checkbox"/>
	If yes, please specify	
Date of issuance of this Summary Audit Report		

* Please only list systems with comparable scopes, including ISCC EU and/or ISCC PLUS if used by the company.

Scope certified (please tick all applicable boxes)	<input type="checkbox"/>	Farm/Plantation	<input type="checkbox"/>	First Gathering Point	<input type="checkbox"/>	Central Office (Farms/ Plantation)	<input type="checkbox"/>	Central Office (Independent Smallholders)	
	<input type="checkbox"/>	Central Office (Points of Origin)	<input type="checkbox"/>	Point of Origin	<input type="checkbox"/>	Collecting Point	<input type="checkbox"/>	Warehouse	
	<input type="checkbox"/>	Logistic Centre	<input type="checkbox"/>	Trader with storage	<input type="checkbox"/>	Trader*			
		<input type="checkbox"/> Processing Unit: Please specify below							
	<input type="checkbox"/>	Oil Mill	<input type="checkbox"/>	SAF Production Plant (HEFA)	<input type="checkbox"/>	SAF Production Plant (AtJ)	<input type="checkbox"/>	SAF Production Plant (ETJ)	
	<input type="checkbox"/>	SAF Production Plant (FT)	<input type="checkbox"/>	HVO Plant	<input type="checkbox"/>	Co-Processing Plant	<input type="checkbox"/>	Refinery	
	<input type="checkbox"/>	Biogas Plant	<input type="checkbox"/>	Biomethane Plant	<input type="checkbox"/>	Methanol Plant	<input type="checkbox"/>	Other Processing Unit	
	If other processing unit is selected, please specify:								
	Is the processing unit producing final CORSIA eligible fuel (i.e., final SAF)?					Yes <input type="checkbox"/>	No <input type="checkbox"/>		

3.2 CB Audit Team

Name of lead auditor:	
Name(s) of further auditors of the team	
Name of GHG expert**	

* Please note that under ISCC CORSIA, blending facilities are certified under the scope of Trader.

** Only relevant if individual life cycle emissions calculation is applied.

3.3 Risk Assessment

Result of the risk assessment	<input type="checkbox"/> Regular	<input type="checkbox"/> Medium	<input type="checkbox"/> High	
Major risk indicator(s) identified	Indicate the relevant risk indicator(s) (general risk indicators, particular risk indicators for farms/plantations and/or for waste and residues) according to chapter 4.2.1 of ISCC CORSIA System Document 204. Example: Proximity to and/or overlap with no-go areas			
Tools and sources used to determine risk factor				
Risk level applied for traceability	<input type="checkbox"/> Regular	<input type="checkbox"/> Medium	<input type="checkbox"/> High	
Sampling applied during the audit	<input type="checkbox"/> Yes		<input type="checkbox"/> No	
	If "Yes" was selected, please answer the following four questions			
Scope(s) audited based on a sample	<input type="checkbox"/> Smallholders, Farms/ Plantations	<input type="checkbox"/> Points of Origin	<input type="checkbox"/> Storage Facilities	<input type="checkbox"/> Dependent Collecting Points
	<input type="checkbox"/> n.a.	<input type="checkbox"/> n.a.	<input type="checkbox"/> n.a.	<input type="checkbox"/> n.a.
Risk level applied for sampling (Please tick for applicable samples)	<input type="checkbox"/> Regular	<input type="checkbox"/> Regular	<input type="checkbox"/> Regular	<input type="checkbox"/> Regular
	<input type="checkbox"/> Medium	<input type="checkbox"/> Medium	<input type="checkbox"/> Medium	<input type="checkbox"/> Medium
	<input type="checkbox"/> High	<input type="checkbox"/> High	<input type="checkbox"/> High	<input type="checkbox"/> High
Total number(s) of operations relevant for calculating the sample size	Smallholders: Farms or Plantations: Points of Origin: Storage Facilities: Dependent Collecting Points:			
Number(s) of audits based on sampling	Smallholders: Farms or Plantations: Points of Origin: Storage Facilities: Dependent Collecting Points:			

3.4 Summary of Activities

Amount of sustainable input material (in mt)*	(This information can be provided on a voluntary basis as this may be commercially sensitive information)		
Raw materials with country of origin*	e.g. sunflower (Bulgaria, Hungary) or UCO (DK, NL), etc. For the materials, please use the wording according to the ISCC CORSIA list of materials		
Sustainable output material*	e.g. crude oil, refined oil. Please use the wording according to the ISCC CORSIA list of materials		
Please indicate the type(s) of sustainable materials traded (applicable for the certification of traders only)	<input type="checkbox"/> Raw materials	<input type="checkbox"/> Intermediate products	<input type="checkbox"/> Final products (i.e., SAF)
Type(s) of agricultural producers supplying sustainable biomass**	<input type="checkbox"/> Smallholders ¹	<input type="checkbox"/> Individual farms	<input type="checkbox"/> Plantations
Total number of agricultural producers supplying sustainable biomass**			
Total agricultural production area of all producers supplying sustainable biomass (in ha)**	<input type="checkbox"/> 1 – 500 <input type="checkbox"/> 500 – 5,000 <input type="checkbox"/> 5,000 – 20,000 <input type="checkbox"/> > 20,000	<input type="checkbox"/> 1 – 500 <input type="checkbox"/> 500 – 5,000 <input type="checkbox"/> 5,000 – 20,000 <input type="checkbox"/> > 20,000	<input type="checkbox"/> 1 – 500 <input type="checkbox"/> 500 – 5,000 <input type="checkbox"/> 5,000 – 20,000 <input type="checkbox"/> > 20,000
Countries of smallholders, farms and plantations covered by certification**			
Information on volumes supplied by agricultural producers or points of origin (in mt per raw material)***	(To be provided on a voluntary basis as this may be commercially sensitive information. For agricultural producers of oil palm fresh fruit bunches this information is compulsory)		
GHG option applied for outgoing sustainable material (Multiple options possible)	<input type="checkbox"/> Default core life cycle emissions value	<input type="checkbox"/> Actual core life cycle emissions value (individually calculated)	

* Applicable for physical input and output. Not applicable for material which is only traded on a “paper” basis

** Applicable for certification of First Gathering Points, Central Offices (farms/ plantations), Central Offices (independent smallholders) and individual certified farms/plantations

*** Applicable for certification of First Gathering Points, Central Offices and Collecting Points

¹ Smallholders are farmers growing a cash crop alongside other subsistence crops on areas usually smaller than 50 ha. The smallholding farm generally provides the main source of income for the family owning the land, and the family usually conducts most of the labour

3.5 Summary of Audit Results

Audit results per chapter of the ISCC CORSIA Audit Procedures:

Chapter	Number of mandatory improvement measures (for main and sample audits)	Number of voluntary improvement measures (for main and sample audits)
Management System		
Traceability		
Mass Balance		
Physical Segregation		
Life Cycle Emissions		
Farms / Plantations:		
CORSIA Sustainability Criteria	Violations of the CORSIA sustainability criteria and ISCC Principle 1 are critical non-conformities and cannot be subject to corrective measures	
ISCC Principle 1		
ISCC Principle 2		
ISCC Principle 3		
ISCC Principle 4		
ISCC Principle 5		
ISCC Principle 6		
Point of origin		
Status of mandatory improvement measures	<input type="checkbox"/> Implemented	<input type="checkbox"/> Not implemented Note: Under ISCC all non-conformities with mandatory requirements must be implemented before a certificate can be issued
Status of voluntary improvement measures	<input type="checkbox"/> Fully implemented	<input type="checkbox"/> Partially implemented
	<input type="checkbox"/> Not (yet) implemented	<input type="checkbox"/> No voluntary improvement measures defined
Remarks, observations of best practices and suggestions for voluntary improvement relevant for ISCC audit	To be provided on a voluntary basis	

3.6 Description of Scopes

This chapter contains a description of the scopes that were subject to the audit. (Note: ISCC will develop a technical solution so that the auditor can choose the text boxes with the description of the relevant scope(s).)

Farm/ Plantation

Farms or plantations according to this standard are agricultural operations where crops are cultivated sustainably, or where agricultural crop residues from sustainable cultivation occur. A farm or plantation is either defined as distinct legal entity or as an organisation managing an agricultural operation, and having control regarding compliance with the ISCC requirements. The audit of a farm or plantation must always cover the entire land (agricultural land, pasture, forest, any other land) of the farm or plantation, including any owned, leased or rented land. Farms or plantations have three options to be covered under ISCC certification: as group of supplier to a First Gathering Point, as part of an independent group of farms/plantations organised under a Central Office, or through individual certification.

Biomass produced on land that is in compliance with the ISCC Principles 1 to 6 is considered to be sustainable:

1. Protection of land with high biodiversity value or high carbon stock
2. Environmentally responsible production to protect soil, water and air
3. Safe working conditions
4. Compliance with human, labour and land rights
5. Compliance with laws and international treaties
6. Good management practices and continuous improvement

The sustainability criteria are divided in major and minor musts. For a successful audit all major musts and at least 60% of all minor musts have to be fulfilled. The criteria of principle 1 are all major musts. For farms within EU Member States that have fully implemented Cross Compliances only Principle 1 has to be checked during the audit. For countries that have ratified the core ILO Standard Conventions, it may be assumed that the social requirements (ISCC Principle 4) are fulfilled. However, the verification is subject to the auditor's risk assessment.

Farms or plantations do not need to operate a mass balance system or quantity bookkeeping in the case of physical segregation. However, chain of custody requirements include the documentation of origin and the verification that the yield per hectare times field size in hectare is in line with the related quantity of crops stored and delivered as either sustainable or non-sustainable (plausibility check). If farms/plantations calculate individual GHG emissions the GHG calculations have to be included in the audit.

Point of Origin

Points of origin (PoO) for waste or processing residues are operations where the waste or residue either occurs or is generated. In case of agricultural crop residues the PoO is a farm/plantation. For other types of waste or residues further categories of PoO are distinguished: business and companies (e.g. restaurants, food processors), private households, community (municipal collection and land fill sites and public containers). PoOs provide a signed self-declaration to the certified collecting point. A sample of PoO generating on average more than 10 metric tons per month of a specific waste or residue (or more than 120 metric tons per year) must be audited in the scope of the audit of the collecting point. PoOs may obtain an individual or group certification on a voluntary basis.

The audit includes an assessment of the materials and the verification of the traceability as well as GHG requirements.

Central Office

A central office is the representative body of at least one group of homogeneous farms or plantations that are certified as an independent group of agricultural producers. A group is regarded as homogeneous if all the farms or plantations are located in the same area, and are similar in their size, cultivated crops and production processes. The central office is responsible for the group management, i.e. the implementation of the internal management system, the compliance with the ISCC requirements of the individual members of the group, and for carrying out the internal audits of the group members. Each group member has to provide a signed self-declaration/-self-assessment form to the central office before the first delivery of sustainable biomass. The certificate is issued for the central office based on a successful audit. A sample of the group members is subject to an on-site audit. The central office is responsible for the determination of the greenhouse gas emissions of the group. The central office has to keep a quantity bookkeeping system on the basis of the outgoing Sustainability Declarations.

First Gathering Point

First gathering points (FGP) are economic operators that receive or buy the sustainable crops or agricultural crop residues directly from the farms or plantations. FGPs have a contractual relationship with the supplying farms or plantations for the delivery of crops or agricultural crop residues and receive a signed self-declaration/ self-assessment form from each farm or plantation before the first delivery of the sustainable biomass. They have to conduct internal audits at their supplying farms or plantations. An important characteristic of a FGP is the task of determining and documenting the incoming biomass according to its origin, quality, amount and greenhouse gas emissions for cultivation. A FGP is responsible for the correct determination of the GHG emissions for the incoming biomass, and is responsible for verifying whether specific options to state greenhouse gas emissions (e.g. disaggregated default value for cultivation or NUTS2 values) can be applied. FGPs are audited regarding the requirements of the management system, traceability, chain of custody and greenhouse gas emissions. A sample of all farms or plantations that have

signed a self-declaration is subject to an audit. At least one farm or plantation has to be audited in the scope of the certification of a FGP.

Collecting facilities used by several farms during harvesting periods, and which are equipped with a mobile weighbridge are not regarded as a FGP. The same applies to storage facilities that do not hold contracts and self-declarations for farms or plantations, but store material at the request of a FGP. A sample of these dependent storage facilities is subject to an audit in the scope of the certification of the FGP.

Collecting Point

The collecting points of waste and residues are economic operators that collect or receive waste and residue materials directly from the points of origin. Collecting points either sell, distribute or process the collected waste and residues. Collecting points are responsible for the correct declaration and documentation of the types and amounts of collected materials. Collecting points have to receive a signed self-declaration from each point of origin to receive material as sustainable. Collecting points receive a certificate upon a successful audit. They will be audited regarding their management system, traceability, chain of custody and GHG requirements.

A sample of (not individually certified) points of origin generating on average more than 10 metric tons per month of a specific waste or residue (or more than 120 metric tons per year) must be audited in the framework of the audit of the collecting point.

Economic operators that collect waste and residues only on behalf of a collecting point are regarded as dependent collecting points and do not need to be certified individually but have to be audited on a sample basis in the scope of the audit of the collecting point. The same applies for storage facilities that only act on demand of the collecting point. A sample of such storage facilities has to be audited in the scope of the certification of the collecting point.

Processing unit

Processing units are facilities that convert input materials by changing their physical and/or chemical properties. Processing units can be oil mills, refineries, ethanol plants, SAF production plants and others. Facilities that only blend SAF and fossil jet fuels are not regarded as processing units. Group certification or sampling is not allowed for processing units and blending facilities. The audit of a processing unit covers the relevant requirements of their management system, traceability, chain of custody and life cycle emissions.

Trader and Storage Facilities, Logistic Centres

Traders and storage facilities are economic operators that trade and/ or store sustainable materials (raw materials, intermediate products or final products). Storage facilities include warehouses, silos, tanks etc. A logistics centre is an economic operator that operates and manages a group of storage facilities under a single legal entity at different geographical sites but

with a corporate management system. A storage facility can be the owner of the sustainable material or store or transfer the sustainable material on behalf of the owner.

All traders and storage facilities trading or storing sustainable materials must be covered by certification. For storage facilities three options can be applied: individual certification as a storage facility (warehouse), certification as part of a group under a Logistic Centre, or covered by certification of a third party (e.g. First Gathering Point, Collecting Point, processing unit, trader with storage)

Traders, independent storage facilities and logistic centres receive a certificate upon a successful audit. Trader and storage facilities are audited regarding their management system, traceability and chain of custody requirements. For the certification of a third party with storage facilities and logistics centres, a sample of all storage facilities has to be audited. The requirements regarding the traceability and chain of custody apply for every storage facility, i.e. a separate quantity bookkeeping calculation has to be kept for every storage facility. The logistics centre or the certified third party using a storage facility is responsible for keeping a separate quantity bookkeeping for each storage facility.

If a trader uses storage facilities that are individually certified or certified as part of a logistic centre, these storage facilities do not have to be included in the sample.
