

ISCC EU Gap Audit Procedure for Chain of Custody

Please read the guidelines carefully before completing the audit procedures!

- This gap audit procedure must be used for ISCC EU audits as of 1st January 2024 to verify compliance with the revised ISCC EU standard and with the requirements specified in the Commission Implementing Regulation (EU) 2022/996.
- This audit procedure must be used in addition to the currently applicable audit procedure system (APS).
- In case of differences between this audit procedure and the currently applicable version of APS, the requirements and verification guidance specified in this gap audit procedure prevail and must be verified.

00. Basic Data

00.02. Audit Specific Data			
00.02.001	Name of Lead Auditor		
00.02.004	Date of the Audit		
00.02.018 (added)	Assurance level of the audit* ¹	<input type="checkbox"/> Limited assurance <input type="checkbox"/> Reasonable assurance	
00.03. Collecting Point, Central Office (Group certification of Points of Origin) and Dependent Collecting Point (not considered as main audit)			
00.03.001	From what category of Point of Origin are waste and processing residues collected?*	<input type="checkbox"/> Companies/businesses (e.g. restaurants, industrial operations, other than refinery) <input type="checkbox"/> Refinery ² <input type="checkbox"/> Palm Oil Mill <input type="checkbox"/> Private households <input type="checkbox"/> Public containers <input type="checkbox"/> Public/communal collection sites <input type="checkbox"/> Landfill operations	
00.03.010	Indicate the total number of ISCC points of origin that are relevant for sample audits (i.e. points of origins supplying more than 5 metric tons of waste/residues per month and have		

¹ For initial audits and re-certification audits under a revised regulatory framework the certification body has to establish a "reasonable assurance level" on the effectiveness of the economic operator's internal processes. Depending on the risk profile of the economic operator, a limited assurance level can be applied on the veracity of its statements. On the basis of the results of the initial audit, those economic operators who are considered regular risk may be subject to subsequent limited assurance audits (see ISCC EU System Document 201 "System Basics")

² A refinery is a production facility that converts/refines input materials into intermediate and/or end products (e.g. bio-oil refinery, edible oil refinery, sugar refinery)

* Not relevant for sample audits

	signed the ISCC self-declaration during the 12-month period prior to the certification audit or public containers).*	
00.03.023	How many dependent collecting points have been audited? (Note: Under ISCC EU, the sampling of dependent collecting points is not possible).	
00.03.026	How many external storage facilities have been audited? (Note: Under ISCC EU, the sampling of external storage facilities is not possible).	
00.05.	Processing Units	
00.05.020	In case of co-processing: Specify the primary method used to determine the bio-yield.	<input type="checkbox"/> Mass balance <input type="checkbox"/> Energy balance <input type="checkbox"/> Yield model <input type="checkbox"/> 14C analyses

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
01.	Management System					
01.01.	General Requirements (to be completed only for main audits. Not relevant for sample audits)					
01.01.012	Are all necessary documents, records, reports, information and data according to ISCC EU Document 203 "Traceability and Chain of Custody" kept for at least five years or longer if required by the relevant national authority?	Verify if documentation for five years or longer if required by the relevant national authority is covered within the management system. Verify the oldest documents available (starting with the registration with ISCC).	ISCC registration, relevant documents, QM system			
01.01.020	Are the current ISCC Terms of Use available?	Verify if the current ISCC Terms of Use are available. Note: Verification is solely for the purpose of improving compliance. Changes to the Terms of Use become binding for the System User in accordance with the relevant provisions of the Terms of Use.	Copy of the current ISCC Terms of Use			
01.01.022	Are the relevant personnel aware of the ISCC System Updates and that they must consider the content and initiate necessary action upon request?	ISCC may communicate additional, specified, or adjusted requirements for System Users by ISCC System Updates which must be taken into account by the System User. The member(s) of staff acting as contact person(s) for ISCC are responsible for internally distributing ISCC System Updates and any other official ISCC communication to all relevant personnel and to initiate necessary action upon request by ISCC. The failure to respond to ISCC Communication and/or take action if requested to so will be treated as major non-conformity. Verify if the concept and importance of ISCC System	Conformation by relevant personnel, system updates received by email and further internal distribution to relevant personnel (if applicable)			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		Updates is understood by the System User. Verify if the System User is aware that all System Updates are sent out by email to the ISCC contact person(s) and that an archive of all System Updates is available on the ISCC Website. (see ISCC Documents 102 "Governance" and 201 "System Basics")				
01.01.023 (added)	Applicable for audits conducted with reasonable assurance: Are risk control measures established for all critical control points to mitigate risks for relevant ISCC requirements (i.e. to reduce the probability and/or negative consequences associated with the respective risk)?	Verify if ISCC System User analyzes, monitors and understands the risks with regards to its own operation at all critical control points. Verify if all risks are addressed by establishing internal risk control measures (see ISCC Document 204 "Risk Management")	QM System, risk assessment			
01.01.024 (added)	Applicable for audits conducted with reasonable assurance: Are the internal processes and risk control measures adequately designed to address the respective risks?	Check whether the design of all risk control measures and the internal procedures are suitable to mitigate the respective risk (see ISCC Document 204 "Risk Management").	QM System, risk assessment			
01.01.025 (added)	Applicable for audits conducted with reasonable assurance: Have the internal processes and control measures been effectively implemented?	Verify if all required risk control measures according to the System User's internal processes have effectively taken place. Verify whether the risk control measures were sufficiently implemented according to the internal procedures (see ISCC Document 204 "Risk Management").	QM System, documentation of implemented controls			
01.02.	First Gathering Point and Central Office (Group certification of Farms/Plantations/Forest Sourcing Areas) – Additional Requirements					
01.03.	Collecting Point and Central Office (Group certification of Points of Origin) – Additional Requirements for Main Audits					
01.03.002	Have all points of origin been registered in the Union database?	Verify if the collecting point/central office registered all points of origin in the Union database	Points of origin registered in Union database			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
01.03.003	Is it ensured that no points of origin supplying material to the collecting point/central office are excluded from ISCC certification?	Check that none of the points of origin that figure in the supply base of the collecting point/central office are excluded from certification according to the ISCC list of non-compliant points of origin. Verify that the system user removed points of origin from the supply basis as soon as they appeared on the list of non-compliant points of origin	List of non-compliant points of origin at the date of the audit (available on the ISCC website), list of supplying points of origin			
01.03.004	Is it ensured that points of origin supplying more than 5 metric tons of waste or residues per month (or more than 60 metric tons per year on a rolling basis) can be clearly identified?	Check the list of points of origin and delivery documentation for points of origin supplying more than 5 metric tons of waste/residue material per month. Basis for the 5 metric tons per month is the output of waste/residues during the last year. Points of origin supplying more than 5 metric tons of waste/residue material per month must be checked on-site based on a sample. If more than 60 metric tons of waste/residues have been supplied during the previous year the point of origin falls into the sample. Note: Points of origin which supply less than 5 metric tons per month may be checked by a certification body if there is indication of non-conformities.	List of points of origin with indicative amounts, delivery documentation, delivered quantities, invoices			
01.03.012	Have all dependent collecting points been audited positively?	In case of non-conformities, have all non-conformities been corrected within 40 days?	Audit reports for dependent collecting points			
01.03.017	Is a list of all external storage facilities used available and accessible?	Check if a list of all external storage facilities is available which are used by the collecting point or central office and if the list includes the name and address of each site. In case individually				

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		certified warehouses or storage locations certified under a logistic centre are used the respective certificate number must be included				
01.03.018	Were all external storage facilities audited positively?	If non-conformities are detected, verify if all non-conformities were corrected within 40 days after the audit.	Audit reports of storage facilities			
01.03.020	Are individual mass balances kept for each external storage facility?	Check if separate mass balances according to the ISCC requirements are available for each site, including individually certified warehouses and storage locations certified under a logistic centre that may be used	Mass balance for each storage facility			
01.03.021	Were the mass balances of each dependent collecting point and external storage location checked (if applicable)?	During the audit the auditor has to check the mass balance of each individual storage location. It is not sufficient to only check a sample of the site-specific mass balances	List of external storage facilities, mass balances checked			
01.04.	Logistic Centre and Operational Units using external storage facilities – Additional Requirements for Main Audits (Not applicable for collecting points and central offices of groups of points of origin using external storage facilities)					
01.04.005	Were the mass balances of every storage location checked?	During the audit the auditor has to check the mass balance of each individual storage location. It is not sufficient to only check a sample of the site-specific mass balances	List of external storage facilities, mass balances			
01.05.	Storage Facilities / Dependent Collecting Points (applicable for individually certified warehouses and operational units audited as a part of a sample or under the certification of collecting points and central offices for waste and residues)					
02.	Traceability					
02.01.	General Requirements (to be completed only for main audits, not relevant for sample audits)					
02.01.011	Are the data entries in the Union database accurate and consistent with the audited data?	The Union database put in place by the European Commission shall ensure the tracing of liquid and gaseous transport fuels that are eligible for being counted towards the share of renewable energy in the transport sector in any Member State. Economic operators are required to correctly	Data entries in the Union database, audited data	Indicate deviations between data registered in the Union database and the audited data		

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		<p>enter the relevant information into this database.</p> <p>Verify that the information entered into the database is accurate and consistent with the audited data, i.e. if the correspond with the figures in the quantity bookkeeping, on sustainability declarations and other relevant documentation. Note: Any deviations between data that was registered in the Union database and the respective data from the documentation of the system user shall be flagged in the audit report and to the ISCC when submitting the certification documents. Such discrepancies may be considered a major non-conformities identified in the audit report and may trigger a suspension of the certificate of the economic operator.</p>				
02.01.023 (added)	Applicable for audits conducted with reasonable assurance: Is it ensured that sufficient data has been gathered and investigated during the audit to obtain a reasonable level of assurance regarding traceability requirements?	Ensure that the sampled document checks allow for reasonable assurance. Reasonable assurance implies a reduction in the risk to an acceptably low level as the basis for a positive form of expression such as "in our opinion, the entity has complied, in all material respects, with the relevant requirements" (see ISCC EU System Document 201 "System Basics")	Sustainability declarations and supportive documents			
02.02. First Gathering Point - Additional Requirements						
02.03. Collecting Point and Central Office (Group certification of Points of Origin) - Additional Requirements for Main Audits						
02.03.004	For material collected from categories of point of origin other than processing units: Has the system user checked	The collecting point or central office must check the plausibility	Contracts, invoices, weighbridge tickets, delivery			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
	the plausibility of the overall amounts of each waste or residue raw material collected from the points of origin?	<p>of the amounts of each material delivered from points of origin (other than processing units), e.g. restaurants, public containers, public/communal collection sites, landfill operations. This includes that e.g., noticeably high amounts or round numbers need to be verified.</p> <p>Verify that documents and/or processes are available, which serves as the proof that the Collecting Point is conducting effective plausibility checks of the material received from points of origin.</p> <p>Compare the collected amounts with the number, size and the type of points of origin. Compare the amounts collected with the amounts of other points of origin that are similar in size and type.</p> <p>Check the plausibility of the collection process and the logistics, e.g. how many trucks and drivers perform the collection, the loading capacity of the trucks etc. This includes the collection conducted by the collecting point themselves, by dependent collecting points, and other service providers for transport.</p> <p>Take into account the indicative amounts provided on the list of points of origins. Verify if there is any indication of the deliberate generation of waste.</p> <p>Note: If the verification process raises questions on the plausibility of amounts, this indicates that the collected material may not meet the definition for waste or residue</p>	<p>notes for collected amounts, Self-declaration, list of points of origin with indicative amounts, information on frequency and capacity of collection trucks, contracts with dependent collecting points and/or service providers for transport, documentation of plausibility checks</p>			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		raw material at the point of origin. In this case sample audits of points of origin must be conducted. To determine if a material meets the definition for waste and residues, see ISCC EU Document 202-5 "Waste and Residues".				
02.03.005	For material collected from processing units acting as point of origin: Has the system user checked the plausibility of the collected amounts of material for each delivery?	<p>In case of material collected from a processing unit (e.g. oil mill, refinery, biofuels plant, food processing unit, slaughterhouse, rendering plant) acting as point of origin, the collecting point or central office must check the plausibility of the collected amounts of material for each delivery and assess whether the collected amount is verifiable. For example, noticeably high amounts or round numbers of materials need to be verified. Verify that documents and/or processes are available, which serves as the proof that the collecting point/central office is conducting effective plausibility checks of the material received from points of origin.</p> <p>Note: If the verification process raises questions on the plausibility of amounts, this indicates that the collected material may not meet the definition for waste or residue raw material at the point of origin. In this case further investigations have to be conducted.</p> <p>For POME oil, EFB oil and/or PPF oil collected from palm oil mills (POM): Check how often and how much POME oil, EFB oil and/or PPF oil is collected from the POM and if the collection frequency and</p>	Contracts, invoices, weighbridge tickets, delivery notes for delivered amounts, Self-declaration, list of points of origin with indicative amounts, information on frequency and capacity of collection trucks, contracts with dependent collecting points and/or service providers for transport, documentation of plausibility checks			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		amount is plausible. Note: If POME oil is recovered from a pond (skimmed off) it can be assumed that the collection does not take place as often as if the POME oil is recovered prior to the release to the ponding system. See ISCC Guidance Document for Audits of Waste and Residues from Palm Oil Mills for further information,				
02.04.	External storage Facilities, Dependent Collecting Points (only applicable for operational units audited as a part of a sample or part of the main audit, in case of Collecting points and Central Offices for waste/residues)					
02.05 (added)	Materials injected, transported and withdrawn from an interconnected infrastructure (applicable for main audits under ISCC EU for biomethane plants, biomethanol plants, Bio-LNG plants, Bio-LNG terminals and biomethane trader (if applicable))					
02.05.001	In case of gas or gaseous fuels injected into an interconnected infrastructure, is it ensured that the consignments of gas or gaseous fuels have been registered in the Union database? (Note: This requirement will become applicable once the Union database is fully operational covering gaseous value chains.)	Sustainability characteristics can only be assigned to consignments of gaseous materials that have been registered in the Union database. Interconnected infrastructure describes a system of physically connected infrastructures including pipeline networks and transmission or distribution infrastructures for liquid fuels, the natural gas pipeline system (gas grid), LNG plants and terminals and storage facilities for gas that can technically and safely be injected. Verify if the consignments of gaseous materials have been registered in the Union database.	Consignments registered in the Union database			
02.05.002	Is the amount of sustainable biomethane injected into or withdrawn from the grid measured and documented?	Check if a grid meter is available, working and calibrated on a regular basis. Check of the grid meter is measuring the biomethane injected into or withdrawn from the grid. Verify the documentation on sustainable biomethane injected or withdrawn.	Documentation on the calibration procedure. Valid calibration sticker/seal. Reporting system on the amount of biomethane injected into the grid. Documentation, reporting on the verification of biomethane transported via			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		<p>Check if the amount of biomethane injected or withdrawn are controlled and verified by a competent or public authority.</p> <p>Verify documentation issued by the injecting or withdrawing entity to the competent authority. The amounts reported to authorities must match the amounts injected or withdrawn.</p> <p>Check, if the amount of sustainable biomethane injected or withdrawn is smaller or as high as the amount of biomethane delivered or received as sustainable</p>	<p>the gas grid by a competent third party organisation</p> <p>The amount of sustainable biomethane injected or withdrawn is smaller or as high as the amount biomethane forwarded or received as sustainable</p>			
02.05.004	Are contracts in place that cover the respective amount of biomethane forwarded in the grid?	<p>Verify if contracts are in place that cover the amount of biomethane that is forwarded in the grid.</p> <p>Note: If biomethane that is traded via the gas grid, the producer injecting the biomethane into the grid issues a sustainability declaration to the recipient. If the recipient is a (paper) trader, i.e. not receiving the material physically, the trader can sell the respective batch of ISCC certified material and forward the respective sustainability declaration to the recipient, e.g. to the economic operator withdrawing the biomethane (physically) from the grid. The grid in this case is considered as transport. It is not permitted for a (paper) trader to buy or sell a sustainability declaration for biomethane without a link to the</p>	Contracts, sustainability declarations			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		respective amount of physical sustainable material.				
02.06. Processing Unit, Final Product Refinement - Additional Requirements						
02.07. Co-processing - Additional Requirements						
02.07.007	Is one of the following main testing methods used to determine the carbon-based share of bio-content? <ul style="list-style-type: none"> - Mass balance method - Energy balance method - Yield model method - Radiocarbon testing 	Verify, which main testing method has been used to determine the bio-content.	Periodic reporting system. Reports, documentation on the determination of the bio-content.			
02.07.008	In the case where the bio-content is calculated using a calibrated mass balance method, verify that the calculation has been performed correctly.	Verify if the following procedure was followed to determine the bio-content and quantity of co-processed biofuel produced during the relevant time period: <ul style="list-style-type: none"> - Determine the system boundary, the relevant inputs, processes and outputs, and the relevant time period. - Determine output specific conversion factors for all outputs of the simultaneous co-processing during the relevant time period. - Recalibrate the output specific conversion factors using 14C laboratory analysis results. The quantity of co-processed biofuel produced during the relevant time period is calculated by multiplying the amount of calculated bio-input by the output specific conversion factor.	Periodic reporting system. Reports, documentation on the determination of the bio-content. Reports on quantities of different inputs and outputs, calculation methodology for weighting factor and bio-yield.			
02.07.009	In the case where the bio-content is calculated using a calibrated energy balance method, verify that the calculation has been performed correctly.	Verify if the following procedure was followed to determine the bio-content and quantity of co-processed biofuel produced during the relevant time period: <ul style="list-style-type: none"> - Determine typical amounts of all relevant bio-based and fossil 	Periodic reporting system. 					Yes	No
		<p>inputs and outputs of the simultaneous co-processing</p> <ul style="list-style-type: none"> - Multiply the quantities of different inputs with respective lower heating values of inputs to determine energy content - Determine weighting factor of bio-based inputs by dividing energy content of sustainable bio-inputs by total energy content of all inputs - Apply weighting factor to outputs <p>The bio-content is calculated by dividing the amount of calculated bio-output by the total amount of that output.</p> <p>Verify the bio-content using 14C laboratory analysis.</p> <p>The quantity of co-processed biofuel produced during the relevant time period is calculated by multiplying the bio-content by the total quantity of that output generated within the relevant time period.</p>	<p>lower heating values, calculation methodology for weighting factor and bio-yield.</p>			
02.07.011	In the case where the bio-content is calculated using a yield model, verify that the calculation has been performed correctly.	<p>Verify if the following procedure was followed to determine the bio-yield:</p> <ul style="list-style-type: none"> · In an experimental set up determine specific outputs of varying bio/fossil input shares and typical losses (water, waste gases) · Based on that, determine amounts of incoming bio-based raw material as well as output amounts and typical fractions of outputs for a 100% bio-process · Calculate total bio-output by subtracting losses of the 100% bio-process from the total bio-based input 	<p>Periodic reporting system. Reports, documentation on the determination of the bio-content</p> <p>Reports from experimental set ups or testing on quantities of different inputs, outputs and losses of varying bio/fossil input shares, calculation methodology for bio-yield</p>			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		The bio-yield is calculated by dividing the amount of calculated bio-output by the amount of bio-input.				
02.07.012	In case that c) bio-yield is determined by 14C analyses, verify that the calculation has been performed correctly.	<p>Verify, whether the following approach was followed:</p> <ul style="list-style-type: none"> · 14C analysis of a known raw material mixture of bio-based and fossil origin · 14C analysis of the respective product pool of the known input mix; either in experimental tests or, if possible, in daily operations · Bio-yield based on calibrated 14C results: Divide amount of bio-product according to 14C analysis by the amount of bio-based inputs according to 14C analysis · Under certain conditions (e.g. for certain inputs like municipal solid wastes or tires) it might also be possible to do 14C analysis for the outputs only and use the resulting fraction of bio-based products during daily operations. Verify whether 14C measurements have been repeated under different conditions (e.g. different shares of bio-based inputs) in order to adapt overall bio-yield for different bio/fossil input ratios. 	<p>Periodic reporting system. Reports, documentation on the determination of the bio-content</p> <p>Continuous 14C analyses for feedstock mixture of biobased and fossil origin and respective product pool</p>			
02.07.014	Did the economic operator reported on any inaccuracies in their measurements? How was this documented?	Verify the documentation on the sampling and measurement regime? Is a detailed documentation available? How were "outliners" taken into account? Are the measurements plausible? Does the company has procedures/ guidelines for sampling/ measuring in place?	Documentation from test results on detection limits. Data on sampling/ measurement regime. Documentation on outliners.			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		Verify, if the detection limit of the testing method selected is sufficient to determine the bio-content. Verify information from the economic operator and the testing organisation.				
02.07.015	Did the economic operator ensure that the detection limit of the testing method selected effectively measure the expected share in the final fuel?					
02.07.017	In case of co-processing bio-genic hydrogen (e.g. from steam reforming of biomethane), is documentation in place that the hydrogen: A) has not been counted as renewable energy elsewhere (no double-counting) AND b) is incorporated in the final product? Is the share of biogenic hydrogen quantified in the final product (e.g. via elemental analysis)?	Verify, if the hydrogen is certified under ISCC EU or any other recognized standard (PoS). Are documents in place (e.g. from supplier or producer; self-declaration; statements, certificates) proving that the hydrogen has not been accounted? Does the production process ensure that the hydrogen (atoms) are incorporated in the final biofuel? Element analysis can be used to quantify hydrogen in the material.	Documents/ certificates/ statements from hydrogen supplier. PoS for biogenic hydrogen. Information on the production process (e.g. chemical reaction). Analytical analysis from independent labs.			
03. Mass Balance						
03.01. General Requirements (to be completed for main and sample audits)						
03.01.002	Is it ensured that each mass balance has a period of three months (for all economic operators except producers and first gathering points of agricultural or forest biomass)?	Check that all mass balances have a period of three months.	Start and end dates of the mass balance periods			
03.01.004	Applicable for First Gathering Points and Central Offices of agricultural or forest biomass only: Is it ensured that each mass balance has a period of 12 months?	Check that all mass balances have a period of 12 months.	Start and end dates of the mass balance periods			
03.01.006	Are there no gaps between the mass balance periods?	Mass balance periods shall be continuous in time, i.e. gaps between mass balance periods shall not occur. Even for periods in which no movement of sustainable material occurs, mass balances have to be kept.	Start and end dates of the mass balance periods			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
03.01.007	Are the start and end dates of the mass balance periods clearly documented?	The start and end date must be clearly documented. Note: The start and end date of the mass balance periods shall be aligned with the four quarters of the year or, in case of a 12-months mass balance period with the calendar year. Alternatively, economic operators may use the economic year that they use for bookkeeping purposes or another starting point provided that this choice is clearly indicated and applied consistently. Any changes in the starting date of a mass balance period must be clearly documented by the economic operator and must be reported to the certification body before the adjustment.	Start and end dates of the mass balance periods, communication to certification body in case of changes to the starting date			
03.01.008	Are the mass balances kept strictly site specific?	Verify if the mass balances are operated at the level of a geographical location, logistical facilities or interconnected infrastructure (e.g. transmission or distribution infrastructures) with precise boundaries within which the materials can be mixed. This also applies to the mass balances that must be kept for external storage facilities or dependent collecting points	Mass balances with indication for which site they are kept, list of external storage facilities and/or dependent collecting points, if applicable			
03.01.009	For mass balance for gas and gaseous fuels injected in the grid: Is it ensured that there were no deficits in the mass balance within the mass balance periods?	Within a mass balance period it is generally possible to go short, i.e. to sell more material as sustainable than is available given that at the end of the mass balance period the sum of batches with corresponding sets of sustainability characteristics added to and withdrawn from the mixture is balanced. For mass	Mass balance, sustainability declarations, Amount of available sustainable material was always equal or higher than amount of forwarded sustainable material within a mass balance period			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		<p>balances for gas and gaseous fuels injected in a transmission and distribution infrastructure such deficits (i.e. going short) must not occur.</p> <p>Verify that at no point within a mass balance period more sustainable material was sold than was available.</p>				
03.01.011	Are separate mass balances in place for materials, intermediate products or fuels that cannot be considered being part of a mixture?	<p>Verify if separate mass balances are in place for materials that cannot be considered as being part of a mixture. Materials can be considered to be part of a mixture if:</p> <ul style="list-style-type: none"> - Final fuels are physically mixed in a container, at a processing or logistical facility, or at a transmission and distribution infrastructure (e.g. gas grid) or site - Raw materials or intermediate products that are not physically identical or part of the same product group can only be considered to be part of a mixture if they are mixed for the purpose of further processing (i.e. the physical mixing of raw materials at the fuel production plant for the purpose of producing biofuels, bioliquids or biomass fuels). This is only applicable for processing units where processing units where fuel is produced - The raw materials or fuels are physically identical or belong to the same product group and are stored within the boundaries of the mass balance (i.e. in the same 	Separate mass balances for materials that cannot be considered being part of a mixture, Information on materials, including information on raw material, sustainability declarations or related delivery documents, documentation that materials are physically mixed on site, documentation that mixed materials are further processed (where applicable)			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		processing or logistical facility or interconnected infrastructure). In this case they do not necessarily have to be physically mixed				
03.01.012	In case materials are kept together in a mass balance they belong to the same product group: Do the materials fulfil the conditions so that they can be considered belonging to the same product group?	<p>The following conditions have to be fulfilled so that raw materials, intermediate products or fuels can be considered to belong to the same product group:</p> <ul style="list-style-type: none"> - The materials must be subject to the same rules for determining the contribution of biofuels, bioliquids and biomass fuels towards the Member State targets for renewable energy (such as food/feed crops, intermediate/cover crops, materials with high iLUC-risk), materials listed in Annex IX Part A RED II, materials listed in Annex IX Part B RED II - In case of raw materials, intermediate products, biofuels, bioliquids and non-gaseous (i.e. solid) biomass fuels they must have similar physical and chemical characteristics and similar heating values - In case of gaseous biomass fuels and LNG they must have similar chemical characteristics 				
03.01.022	Was the assignment of sustainability characteristics to outgoing batches of material done correctly?	Verify if the assignment of sustainability characteristics to outgoing batches of material was done correctly. It must be ensured that the sets of sustainability characteristics are not split. Assigning sets of sustainability characteristics to outgoing batches in a flexible manner is	Mass balance calculation, sustainability declarations/proofs of sustainability for outgoing batches of material

		only possible when materials can be considered to be part of a mixture. See Annex I of ISCC EU Document 203 "Traceability and Chain of Custody" for scenarios of assigning sustainability characteristics				
03.01.023	In case biofuels, bioliquids or biomass fuels are blended with fossil fuels, is it ensured that the amount of sustainable material assigned to the blend corresponds with the physical share of the bio-based fuel in the blend?	When biofuels, bioliquids or biomass fuels are blended with fossil fuels, the information about the sustainability and GHG emissions saving characteristics assigned to the blend shall correspond to the physical share of the bio-based fuels in the blend (does not apply in case biomethane taken from the grid). Verify that for no more fuel the sustainability characteristics have been assigned than bio-based fuel is physically in the blend.	Outgoing sustainability declarations, delivery documents about the entire delivery of the blend, contracts, weighbridge tickets			
03.01.024	In case batches of sustainable fuels were delivered to an uncertified economic operator, did the material booked out of the mass balance correspond to the physical nature of the material delivered?	When a batch of sustainable raw material, intermediate product or fuel is delivered to an economic operator that is not participating in a voluntary scheme or national scheme the batch with the respective set of sustainability characteristics and quantity must be withdrawn from the mass balance. The type of material booked out of the mass balance must correspond to the physical nature of the raw material, intermediate product or fuel that was delivered, i.e. a flexible assignment of sets of sustainability characteristics to the outgoing batch is not possible.	Mass balance, outgoing delivery documents, contracts, weighbridge tickets			
03.01.025	In case batches of sustainable fuels were used to comply with an obligation placed on a fuel supplier in a member	Verify if a batch of fuel that was used to comply with an obligation placed on a fuel supplier by a	Mass balance, documentation on fulfilling of the quota with the

	state booked out of the mass balance (applicable for the quota obliged fuel supplier in a EU Member State?)	Member State, it shall be considered to be withdrawn from the mixture, i.e. it must be booked out of the mass balance.	competent Member State authority			
03.01.026	In case of a transfer of sustainability characteristics from biomethane to Bio-LNG on a mass balance basis, were plausible conversion factors and GHG emissions considered that would have occurred in case of a liquefaction? (Note: applicable for Bio-LNG plants or LNG-Terminals).	Verify if plausible conversion factors are applied. Verify if plausible GHG emissions are applied. Note: The quantity of Bio-LNG or biomethane that can be claimed from a plant is limited to the amount that can (physically) be processed by the plant. Note: The quantity of Bio-LNG or biomethane that can be claimed is limited to the amount that can (physically) be processed or received.	Mass balance, conversion factor, GHG value, incoming and outgoing sustainability declarations			
03.01.027 (added)	Applicable for audits conducted with reasonable assurance: Is it ensured that sufficient data has been gathered and investigated during the audit to obtain a reasonable level of assurance regarding mass balance requirements?	Ensure that the sampled document checks allow for Reasonable Assurance. Reasonable assurance implies a reduction in the risk to an acceptably low level as the basis for a positive form of expression such as "in our opinion, the entity has complied, in all material respects, with the relevant requirements" (see ISCC EU System Document 201 "System Basics")	Mass balance information and supportive documents			
03.02.	Processing Unit and Final Product Refinement – Additional Requirements					
03.02.019	In case biomethane is further processed into other fuels (e.g. biomethanol): Is an appropriate mass balance in place for the bio-based content that enters and leaves the process?	Verify if an appropriate quantity booking keeping (mass balance) is in place that cover the amount of bio-based content that is entering and leaving the process. If biomethane is sourced via a direct connection to a biomethane plant, verify that the capacity of biomethane coming from the biomethane plant is	Quantity bookkeeping, mass balance, incoming and sustainability declarations, delivery documents, conversion factors, information of received biomethane via direct connection

					Yes	No
		consistent with the amounts of biomethanol assigned as sustainable by the producer. It must also be ensured that the biomethane is not claimed by another economic operator.				
03.03. Processing Unit - Biogas Plant						
05. Greenhouse Gas Emissions						
05.01. Processing Unit Requirements						
05.01.011	Do the emission factors taken from databases and literature comply with the ISCC requirements and does the input data fit the process (e.g. emission factor of heat production fits fuel and type of heating system, correct units)?	Emission factors shall be based on Regulation (EU) 2022/996, ISCC 205 or other official sources (if available), LCA Databases such as Ecoinvent, peer reviewed literature or individually calculated or measured (e.g. LHV could be measured through laboratory analyses) may be used as well, as long as the methodology for the GHG calculation complies with the methodology set in the RED II and is verifiable during the audit or the supplier of the EF/LHV is ISCC/ISO certified. For emission factors used from other literature sources than ISCC 205 or the Regulation (EU) 2022/996, it shall be guaranteed that direct and indirect emissions were included (e.g. emissions of burning of process material and all upstream emissions). The use of alternative values must be duly justified. In case alternative values are chosen, this must be flagged up in the documentation of the calculations in order to facilitate the verification by auditors.	Emission factors used, Regulation (EU) 2022/996, ISCC 205 document, other sources used			
05.01.021	Have emissions of depots and filling stations been included in the GHG calculation?	The emissions of depots and filling stations may be calculated using the data provided by the JRC	Emissions of depots and filling stations			

No.	Requirements	Verification guidance	Evidence/ Documents	Findings	Conformity	
					Yes	No
		(European Commission, Joint Research Centre, Padella, M., O'Connell, A., Giuntoli, J. et al., Definition of input data to assess GHG default emissions from biofuels in EU legislation – Version 1d – 2019, Publications Office, 2019, https://data.europa.eu/doi/10.2760/69179 .) The provided values (depot: 0,00084 MJ/MJ fuel, filling station: 0,0034 MJ/MJ fuel) must be multiplied by the appropriate national electricity EF from the Regulation (EU) 2022/996.				
05.02.	First Gathering Point, Central Office and Collecting Point Requirements					
05.02.003	In case company applied NUTS2 values or NUTS2 equivalent values: Is it ensured that the GHG values for incoming materials comply with ISCC requirements?	If NUTS2 values or NUTS2 equivalent values are applied, verify the correct application (e.g. by checking if NUTS2 values are available and recognized by the EC (i.e. approved through an Implementing Regulation). Only NUTS2 values or values from equivalent regions in third countries that have been recognised by the European Commission as being accurate can be applied. Verify the location of agricultural production, and if the correct NUTS2 value for that location or the highest NUTS2 value for the respective crop of the EU member state or third country has been used	Documentation GHG value, NUTS2 report of Member State (or recognized report of NUTS2 equivalent values by third countries) and respective NUTS2 value, which is applicable for feedstock.
